

## *Long Range Locators kit*

affordable, easy to use long distance gold detectors

*LRL kit includes 2 long range gold locators with carry case.*

*Our set of gold plated L rods with amplifier for signal receiver, plus the new Eliminator e-120 B transmitter with twin function: frequency generator detector and mineral rejection filter!*

*The price we offer the LRL kit is lower than any other comparable unit, but the performance is excellent.*

**Eliminator e-120 B** is a long range locator - gold detector, featuring a ground probe transmitter that amplifies electronically the natural radiation of the selected metal for a reliable metal discrimination.

- **Detector function:**

Before using the L rods, power on the Eliminator e-120 B, and set the frequency to scan for the desired metal type. Available frequency selections are gold, silver, copper, iron, lead, aluminum, void and water. The L rods can be used afterwards as a receiver to trace target signal. The L rods are attracted to the Eliminator e-120 B signal which stimulates and radiates the buried object. The other natural false signals, (for example minerals) are weaker and fail to attract the L rods. The L rods respond to the strongest signal within the range.

- **Filter function:**

As soon as the L rods pick up an attraction, Eliminator e-120 B can be set to filter function and validate the "suspected" target.

Select the desired target size to be rejected using the Eliminator e-120B rotary knob.

The Eliminator rejection knob when rotated progressively to the right knocks out minerals, small gold particles, gold nuggets, coin size, ring size, soda can size objects...

Set the rejection point, wait approximately 10 minutes and scan again with the L rods.

Minerals and smaller objects ( weaker signals ) are eliminated.

Signals that continue responding worth to be traced.

Comparable to other gold detectors the Long Range Locators kit is the best value for money.

**The Long Range Locators kit ( LRL kit ) includes:**

- Gold plated L rods, Power module amplifier for the L rods with "Y" connection cable,
- New Eliminator e-120 B twin function, frequency generator plus mineral / small target rejection filter,
- Stainless steel ground probe,
- 2 x 9 V Batteries,
- Carry case,
- English instructions manual,
- 2 years guarantee
